-I- FUNCTION: RESISTANCE TO HG(2+) IN BACTERIA APPEARS TO BE GOVERNED BY A SPECIALIZED SYSTEM WHICH INCLUDES MERCURIC REDUCTASE. MERA PROTEIN IS RESPONSIBLE FOR VOLATILIZING MERCURY AS HG(0).

-I- CATALYTIC ACTIVITY: Hg + NADP(+) + H(+) - Hg(2+) + NADPH.

-I- COPACTOR: FAD.

-I- SUBUNIT: HOMODIMER.

-I- MISCELLANEOUS: THE ACTIVE SITE IS A REDOX-ACTIVE DISULFIDE BOND.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             PRINTS; PR00945; HGRDTASE.
